

# DARK NIGHT SAFETY FOR CATS

The risk of your cat getting injured or lost when out of the house increases during the winter months, as the days get shorter and the nights get darker. Here are our top tips on protecting your cat on dark nights this autumn and winter...

- 1** Invest in a high vis or reflective collar for your cat. This will allow them to be visible to cars in the dark.
- 2** Make your cat's mealtimes earlier to encourage them inside before it is dark.
- 3** Keep some of your cat's toys hidden away and get them out after dark to encourage them to stay inside.
- 4** Microchip your pet - just incase they get lost or spooked in the dark.
- 5** Always check the wheel arches of your car in the morning, cats have a tendency to sleep on the wheels to stay warm.
